ABSTRACT

Octanox Token provides virtual economy and virtual activity infrastructure. Octanox running on WAVES blockchain allows easy, cheap, and fast transaction. What is WAVES? A wave is a decentralized financial trading platform written in Scale and built on its own blockchain with custom tokens being its main feature. Custom tokens, or 'Custom Application Tokens' (CATs for short), allow for a wide range of uses. They enable decentralized crowd funding as well as transferring, trading, and storing of fiat and digital currencies.

In essence, a custom token can represent any value assigned to it while being cryptographically secured through the Waves blockchain. A decentralized, manipulation-free voting system will allow projects built on top of the platform to communicate and make decisions hand in hand with their community. Due to the distributed nature of Waves, a reputation system is on the roadmap whose function will be to assign a certain reputation score to an account based on its network activity and other parameters. - Quoted from waveswiki.org.

Octanox is focused on multiple platforms that would be used for virtual economy and virtual activities. Octanox is a revolutionary new way to make transactions online. Our unique platform prevents any interference to Octanox and its source code could be considered for a publicly release to ensure transparency. Octanox is a solution to a growing problem and would be focused on many virtual sectors to support virtual activity and economy.

Nowadays people in some countries have problems with banking. We expect Octanox will solve this problem. Also, Octanox will participate in other problem-solving situations.

INTRODUCTION

Octanox is an innovative, secure, decentralized, and low transaction cost payment system. The payment solution network is built using the cutting-edge cryptocurrency technologies. Octanox offers solutions for faster transactions and unique technology model provided by Waves. Using less energy than Bitcoin, Octanox makes it more environmentally friendly to our planet. The difference between Octanox and Bitcoin is that Octanox isn't mineable, while Bitcoin is. The Octanox development team consists of highly skilled professionals, who are always thinking of innovative ways to develop Octanox into the best payment system available in the cryptocurrency field. With their skills, there is a major possibility of Octanox growing into something to compete with Bitcoin.

Everything in the twenty-first century is turning digital and we expect Octanox to be a part of the solution. To solve security and transaction speed problems while currency backed by the government will be abandoned in favor of decentralized forms of monetary exchange. Octanox was founded in April 2017 with the aim of creating a polished, user-friendly, and cohesive solution for businesses seeking a competitive edge from blockchain-based technology, as well as for everyday users to use to complete regular transactions amongst peers and merchants. Octanox has worked to smooth away some of the nascent technology's rougher edges and refining it into a product ready for wide-scale deployment in global commercial and financial industries.

It solves many of the challenges that Bitcoin faces and it's the perfect solution to turn heads in the skeptical financial markets. Previously a company wanting to use more than one or two advanced functions simultaneously would have had to navigate a mess of currencies, platforms, and protocols. This is time consuming, annoying, and requires unnecessary resources to go to waste. Now the best blockchain-based applications are available in one meticulously engineered platform. Octanox is the electronic currency for the future. It will solve the many problems associated with regular currencies.

PROJECT MISSION

5

The mission is to ensure that people are trained on blockchain technology using a fun approach to increase awareness. This will be done using android games as a medium. This is a feasible strategy because most people own a Smartphone. This can be used as a gateway to increase the popularity of crypto currencies among the masses. Those gaming on the platform can donate to Octanox using the integrated OTXPay in the Web store.

Even with little resources, the development team is sure Octanox could grow with its special project structure. Octanox is dynamic project that one day it could support another sector. We expect Octanox will running and funded because it has a unique business structure and model.

Octanox is designed to increase stability of the virtual economy with its low supply. As the demand for the product increases, the value of the cryptocurrency will rise because of the capped supply. This gives another option for users especially in areas where access to banking services is difficult. In regions like Asia, users can become their own bank using the decentralized system. The Octanox cap has been set at 8.5 million coins. This number is adequate enough to run the virtual economy the firm is trying to build. One thing to note is that Octanox will adhere to Shariah law to ensure that the service is interest free because a large population of the Asian continent is Muslims.

CUSTOM MULTI - PLATFORM

6

Octanox is supportive of many platforms in which distinguish it from other failed coins and electronic currencies. It is a complicated and tough process to integrate a coin into different areas/fields and multiple platform currencies are indeed a rare sight. However, Octanox has bridged this gap and looks to forge onward with this advantage.

For consumers, the advantages of custom multiple platforms are that it reaps the full benefits of each platform while saving you time and resources. Everything you need can be imported and exported between the unique and connected platforms.

ROAD MAP

7

The roadmap gives details on what has happened and the milestones that have been set. The first step was the conceptualization of the idea. This was done by the founders who then went ahead to develop the alpha version of the Octanox blockchain. The platform chosen was the Waves platform because it provides greater customization than Bitcoin or Ethereum. A whitepaper was created to give technical details to enthusiasts who were willing to invest in Octanox. However, the planned ICO did not yield the required capital.

In response, the Octanox team has made some changes but still, retains the initial mission of becoming one of the top crypto currencies used in completing virtual transactions. However, crowd funding will be done using other methods. The first is the creation of a unique game that could provide both educations to potential users and generate revenue. The game, Surviz is an open world multi-player game that requires the players to survive waves of zombie attacks. There are in-game purchases that can only be completed using Octanox.

Aside from the game, other aspects of the project will be developed. They include Lesfex, a cryptocurrency exchange that will provide Octanox with cross-platform convertibility. This is important to make the coins more liquid. The endearing factor is the low transaction fees of only 0.15 percent. Coupled with other features set to be implemented in the Octanox ecosystem, the firm will be able to get the required capital to proceed with the full launch of Octanox available to all users. It will initially start in Asia and slowly expand around the globe as the main virtual economy cryptocurrency.

ROADMAP

8

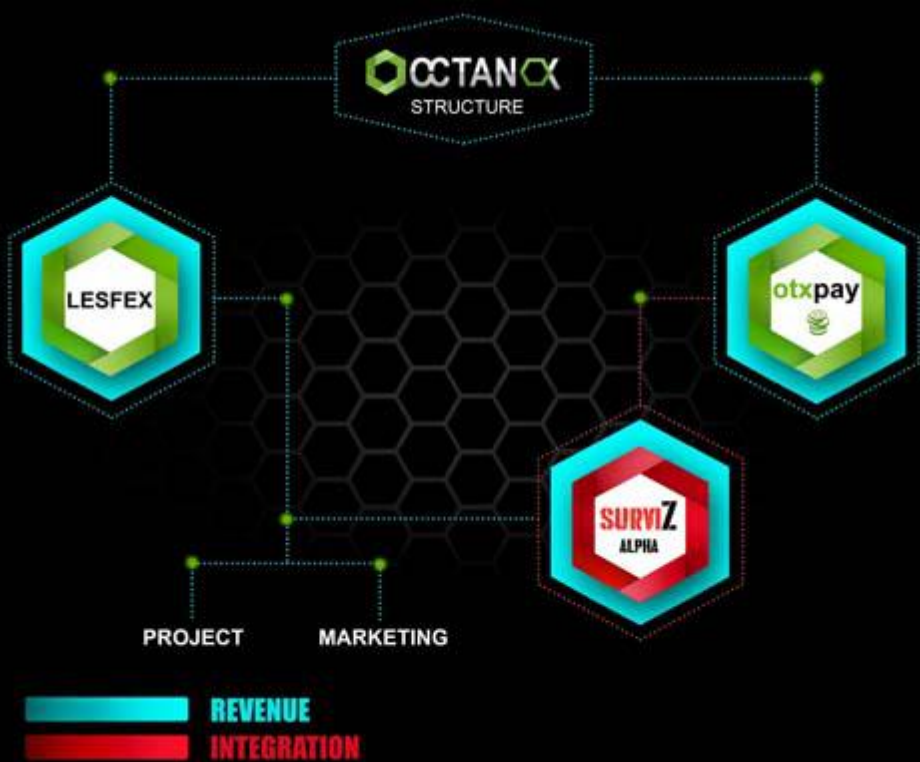

PROJECT STRUCTURE

The structure of the Octanox ecosystem is as follows. The blockchain is the most important part providing the platform where multiple business ventures will be launched. The OTX coins will be the cryptocurrency of choice for the Octanox ecosystem. Users will need to register for the Octanox e-wallet before they can make transactions in the e-ecosystem. Applying for the e-wallet will take only a few moments, and the money will be secured by security protocols embedded in the blockchain algorithms.

The next structure is the development of the exchange as well as the payment processing feature. The LesFex exchange will allow the cross-platform exchange of digital and fiat currencies to OTX coins that can be used in the ecosystem. Investors who wish to speculate can simply purchase these coins and hold them until the value increases in relation to other currencies. The supply of coins will be capped almost guaranteeing that the value will keep increasing as demand in the virtual world keeps increasing. The OTXpay is a payment processing platform that will allow the purchase of virtual items to be used in games. This can be used on any platform regardless of whether it is on Android or the Windows platform. This is made possible by blockchain pruning to ensure that the chain does not become too big for handheld devices like phones and laptops.

Additional projects will be launched like the Surviz. It will become the first game to use OTX coins to make purchases. Other game developers will be engaged to allow the use of the coins in their games. Softou will also use Octanox as the payment platform for its web-based services. Finally, the Octanox Foundation will be launched to ensure that the charitable roots of the business are used to make the world better. The money raised will be used for environmental and humanitarian purposes. This can also be used by other non-profit firms that seek to crowd fund charitable efforts.

E-WALLET

Octanox will provide unique web wallet with smart features to make economy activity easier. It will secure OTX as a ticker name, which looks modern and sleek, and attracts people to take a glance at it. A web wallet is important to attract customers and consumers who may not be as technically advanced as many crypto users are.

Web wallets offer a convenient way for consumers to store and use their Octanox. Regular people do not want to be burdened with complicated matters such as encryption and downloaded wallets. Octanox will help bridge the gap between technical diehards and those who do not use technology as much. We will offer a secure and encrypted wallet that be downloaded for those that value security. If our web wallet isn't suitable for you, store your Octanox in an official web wallet sponsored by Octanox itself. This eliminates the trust factor that consumers must provide a third party when they use web wallets.

This is another huge advantage that Octanox will exploit to become a rival to the entrenched crypto currencies like Bitcoin and Ethereum. The web wallet would be provided on OctaGUI and will have the necessary security features in place to prevent abuse and hacks. Things like two factor authentications and refreshing passwords will be available for those who want it. Ample precautions will be in place to ward off hackers and password crackers. The web wallet will be housed in its own website that will be accessible through the Octanox ICO thread as soon as the wallet is developed. The wallet will also be converted into an app for mobile users, as phones are a big part of our daily lives.

OTXPAY : PAYMENT GATEWAY

OTXPAY is payment gateway that could be integrated with platforms such as; Softuo, SurviZ Web-shop, and SurviZ OTX deposit. This will enable the ability to make safe and secure purchases on these platforms using OTX. With most blockchain technology, confirmations will be required to verify transactions. Therefore, putting you at easily knowing that your information is safe while purchasing the things you desire using OTXPAY.

LESFEX : CRYPTOCURRENCY FAIR EXCHANGE

Lesfex is one of Octanoxs' business branches. Lesfex is a cryptocurrency exchange with unique a business model. While no one really knows where other exchanges disperse their listing fee profits, 100% of Lesfex listing fees would be used for marketing and other directly related efforts to Lesfex. We will be transparent in hopes to create more trust from users and business clients.

SURVIZ

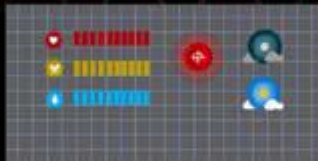

14

THE FIRST BLOCKCHAIN 2D OPEN WORLD SURVIVAL MULTIPLAYER GAME

Surviz is the first blockchain 2D open world multiplayer survival game that will allow in game economy. Players try to survive from the zombie apocalypse while zombies are not the only threat. Other players are. Players must find food, water, and items to stay alive. There are millions of users in the gaming world. Besides people having fun playing Surviz, we anticipate new customers to Octanox while enabling this game to be a crypto education bridge for new comers.

For the first stage, it will be available for Android. If the project is running smoothly; Surviz may be available on other devices. Some of the features are:

-THIRSTY AND HUNGER SYSTEM

SURVIV7

15

THE FIRST BLOCKCHAIN 2D OPEN WORLD SURVIVAL MULTIPLAYER GAME

RANDOM ITEMS SPAWN

Players need to find food by exploring the map. Items will be spread out. Hunger indicator will be decreased if the player is online. If the hunger status reaches 0%, it will decrease the health of the character.

Useful items will be spread throughout the map. Players can find bread for example; items would be respawned on scheduled time.

BACKPACK SYSTEM

Looted items can be stored in a player's backpack, but it has maximum spaces available.

WEAPON SYSTEM

Weapons are rare because the city is already a mess due to the zombie apocalypse. Ammo would be purchasable by using OTX on a scheduled time and the amount is limited.

UNIQUE ENVIRONMENT

SURVIZ

THE FIRST BLOCKCHAIN 2D OPEN WORLD SURVIVAL MULTIPLAYER GAME

UNIQUE GAME PLAY

Surviz game play is like the first generation of GTA San Andreas. Welcome to Surviz, you should survive the zombie apocalypse with another player or against them to survive. The map is still under construction and the game play is open world.

SURVIV7

18

THE FIRST BLOCKCHAIN 2D OPEN WORLD SURVIVAL MULTIPLAYER GAME

RANDOM ZOMBIES SPAWN

Becareful survivors Zombies will be spawned randomly.Keep your eyes open and stay alive.

TRADE ZONE

In this area players can't hit each other because this is a green-zone. Players can trade items safely.

UNIQUE CHARACTER

Choose your favorite character with different model and bring it to the zombie world. The character can be implemented with a backpack and weapons. For the next stage of development, it may implementable with unique accessories.

LOOTING SYSTEM

Players should find useful items inside of buildings and around the map.Find unique items to support zombie survival.

SCHEDULED AIROPDOP

Foods and random items will be spawned on a scheduled time. Players will get notification for an airdrop and navigation will be available on screen. Be careful from other players on while making your way to an airdrop.

WEB SHOP

Rare items with limited stock would be available on web shop to purchase by using OTX. Any purchase would be counted as donation for the project and 50% of the OTX from the purchase will be burned.

FEATURES ARE CHANGEABLE DEPENDING ON THE SITUATION. WE WILL ANNOUNCE IF THERE ARE ANY CHANGES.

SOFTUO

Softuo is a web agency allied strategically with Octanox. Use our web design and development services, application development, online marketing, corporate identity, and so forth. Happily paying with OTX this is one of the bridges to use Octanox. Softuo users can pay for services to build websites, online shop, or accept Octanox using OTXPay if they are merchants.

OCTANOX FOUNDATION : SUPPORTING HUMANITY

HOW THE HUMANITY PROGRAM WORKS

1,000,000 OTX reserved for Humanity Program

Max. 2000 OTX reserved every month

If price increased th humanity monthly funds would be decreased and announced to the community for transparency

Octanox Foundation supports Humanitarian and Social Activity. We really expect Octanox could run on many and different sectors to give benefits to everyone. We will control the Octanox Humanitarian funds for stabilization on market. More details will be provided soon. We will update at foundation.octanox.org

OCTANOX BUSINESS

Despite not hitting our goal from the ICO, we refuse to give up on Octanox. We want to build a business ecosystem that runs on Octanox. Our mission is a long-term mission to improve the lives of everyone who uses the system.

Surviz and Lesfex are our strategy to get future funding for Octanox development. Surviz is expected to earn revenue from mobile advertising. Besides being able to use Octanox as payments for donation, Bitcoin may be added to that list to get in game unique items.
