

Neutron Coin

White Paper

A complete and concise report that informs investors about our vision and plans to get there. Welcome to Neutron.

The new standard in PoS coins

Neutron coin (NTRN) is a maturing, dependable blockchain that features Proof of Stake and a Nucleus Node System. Our goal is to help the cryptocurrency culture spread and to help its community and new users. Very low fees and very fast transactions are among Neutron's strong points.

Sending Neutron to another wallet is simple & fast. Tests show that a NTRN transaction is processed in a matter of seconds by our network. Transaction times of minutes and even hours are unreal and end any possible real-life application.

One of the favorite features of our investors is the automatic interest payments. It's not complicated to "mine" Neutron, you just have to leave them in your wallet running on your computer and that's it! Our masternodes offer an estimate ROI of 60% per year.

One of the most important factors to stay relevant and competitive, not only in the crypto space, but also in the banking and web payment markets, is transaction fees. Ours had to be one of the lowest in the market – and they are. Cheaper, faster & easier.

Vision & Values

Neutron is all about being kind. We want to make crypto easier to grasp, support crypto educators and teachers & help to demystify and spread cryptocurrency culture.

We believe in honesty and hard work. That's why none of our team members hide their identities. Our team is proud to have the reputation of being one of the main differentials of our coin.

Nothing can break us and nothing ever will. This is Neutron's resolve. This is the resolve cryptocurrency needs. Real hard work and no empty promises. Neutron has been around since 2015 and we're not going anywhere.

Our goal is a healthy and stable price increase backed by hard work and technology. This is a long-term project.

New Champion Team

Since the project's inception, Neutron has been taken over by new, strong leadership.

Under this new management, Neutron's price has experienced a 100x increase in less than one year. In that same year, we went from 1 masternode to 400. And in that very same year, the Neutron Team has also released a decentralized education platform to help investors and the crypto community.

All major wallet and network bugs were fixed by the current development team. Neutron now runs on a robust and reliable network with a simple and seamless wallet.

24/7 Customer Support

Our famous customer support is one of our most loved features. We offer a custom one-on-one tech support experience for investors who are having trouble setting up their recently acquired masternodes or maybe answering frequently asked questions.

We offer a large number of guides, alongside a rich FAQ area on our website. We are working on our own collection of video content to further improve our already-stellar customer service.

Also, our team is known for being one of the most responsive in the crypto space and we only plan to make it better from here.

Chat or email, we are there for you when you need us most.

Technology Overview

Rewards reduce over time, slowly decreasing over every million blocks. By the end of each million block period, the reward will be half of what it was at the beginning of that million blocks. Maturity is reached at block 10,000,000 (there will be plans during the “Golden Age” of Neutron post block 10,000,000 to redistribute an increased network fee per transaction to all wallets based on the individual wallets weight. Those rewards will be divided upon the same percentages that the stakes are now, roughly 59.4% to the master nodes, 10% to the project funding and 30.6% to the winning wallet as declared by the network. This will evolve over the coming decades as new ideas emerge and mature.

Technology Core Values

The Neutron Team is centered around propagating the positive effects of mainstream Cryptocurrency adoption. As a result, Neutron's first sub-project was created and the framework for a crypto-based education platform was conceived. Ideally a place for those both new and experienced in the crypto world to learn from classes their peers offer for a small BTC/NTRN price that is remitted 100% to the teachers as to incentivize and stimulate both communal growth and quality. "This is only the first of many different projects to come."

It is our mission to free minds and better lives. Honesty, Respect, and Kindness go a long way. In the future, we will showcase the positive influence cryptocurrency has in the world.

So what makes Neutron Different than any other Staking/Masternode coin?

Simply put, the math. We believe that Neutron is in the "Goldilocks Zone".

Larger supply than BTC and LTC but smaller than ETH with consistent staking rewards for anyone holding a balance. At 17% the reward in the form of NTRN per stake is much better than anything a traditional Fiat institution can offer on investment returns This also makes Neutron an interesting tool for times of a stagnant BTC market in which the returns in the form of staked NTRN outweigh the potential profit (or loss) of a volatile BTC marketplace. A person could invest 1 BTC, if that person stakes that amount of NTRN and then sell if they like at any time to reenter the market. Neutron is a long-term hold style coin. As the value of NTRN increases, so does the value of the initial investment and the returns making Neutron quite valuable to those holding enough to generate a truly passive income of newly

minted Neutron. As this is realized in mass and coupled with the increasing scarcity, the perpetuation of those just starting to those leaving, and others coming back will always be a revolving door. A stable price floor with natural volume increase will support a strong backbone for this type of ecosystem to thrive. It's actually quite simple, and that's also a reason we love it.

Self Funded System

Constant growth and the innovation of our systems is a crucial objective for our strategy. Therefore, Neutron is a self-sufficient system that has its own fixed budget that maintains and improves the project. Each block reward is split with 10% dedicated to the budget Project Fund and 90% dedicated to reward masternodes and stake mining.

Budget Allocation

The project funding will be allocated between the following areas:

Development:

DEX API Support

Future Projects / Features

Wallet Redesign GUI

Enhanced Customer Support

Enhanced Security

Education Platform

Content Creation

Recruiting Instructors

General Educational Marketing

Administrative Growth:

Securing Additional Exchanges

Development and Support Expansion

Marketing:

Graphics / Illustrations

Video Production

Advertisement

Content Creation
Campaign Creation & Execution
Additional Sponsorships
Promotional Events
Creating Educational Material
Contests / Competitions
International Market Expansion

Decentralized Education Platform

The main goal of Neutron's Educational Platform is to help people who want to know more about crypto and also support instructors. We find that education is the key to a better world. Neutron is the first crypto-based decentralized educational platform on the planet. We want to take free and life-changing education to every corner of the world, from the community to the community.

Delivering Quality Education

One of our goals is also delivering affordable life-changing education to everyone, everywhere. We are living in a disruptive moment and we have to exploit this moment to the max. With the blockchain technology we will be able to deliver professional grade education & certification to anyone. And since the blockchain world is rapidly expanding, the number of career opportunities emerging from this market will grow exponentially.

Education & Finance have been controlled by the powerful few up until now. The blockchain revolution is upon us and it is unstoppable.

Building The Crypto Library

We will search, scan and secure the best content out there and add it all to our platform. Youtube videos, ebooks, courses, articles, whatever it is, if it offers quality content and it is free we will add it to our platform. We want to spread the best cryptocurrency can offer, especially free content, so we can take quality and life-changing information to those who really need it.

As content comes, we will expand to ebooks, presentations, podcasts, or any kind of medium related to cryptocurrency learning. The possibilities are endless.

Supporting Our Teachers

Teaching is one of the most important professions in the world and unfortunately most governments don't pay or support them enough. So with the master node technology that our coin offers, all payments received by the teachers will be stored in their Neutron wallet,

therefore earning interests every day without doing anything but teaching. With time, the teachers will start earning a decent amount allowing them to have a proper lifestyle just by spending their interest and yet preserving all their course revenue. It is a solid and a deflationary coin, it is perfect to be used as a retirement fund.

The Platform Status

Stage 1 – Beta Testing [✓ Delivered]

Neutron's Educational Platform offers a top-notch drag & drop editor, allowing the teacher to easily create, modify and publish their courses with approved and tested layouts to guarantee seamless learning. It is completely free to use. Just a small number of courses will be added at this stage in order to test the platform.

Stage 2 – Free Content Addition [✓ Delivered]

In order to step-up our available content and further test the platform we will start adding free content submitted by the community and our own personal curated selection.

Stage 3 – Library Creation [✓ Delivered]

Once we have enough content, we will start to restructure the UI & UX of the whole platform and site to better offer free quality cryptocurrency content.

Stage 4 – Memberships

At a point, we will offer monthly memberships with cutting-edge premium educational and informational content.

Stage 5 – The Marketplace

Once we have fully mastered an optimal educational niche we will expand to other cryptocurrency products outside of education. It will be the store that sells anything crypto.

Stage 6 – Franchising & Affiliate

At this final level, once everything is fully working, we will package it and offer comprehensive plans for our community to profit from advertising our content. Also, we are studying partnerships to create brick & mortar franchises and sell pre-made crypto educational courses & educational methods.

Marketing & PR

Since this is a very dynamic department we'll show you our broad marketing analysis. This is a forever changing market and the strategies, tools, budget distribution and media outlets have to change as fast as the crypto market does. So it makes no sense to have or present you a solid and static digital strategy. For those who are interested to see our marketing approach & master strategy here is our guide.
