# MARTEN JUNG & STEFAN SCHMIDT Unibright Founders

From the playground to the blockchain

1990

Teaming up on the soccerfield

2000

Reaching Master of Computer Science Level

2005

Own Business in software development and integration

2015

Shareholder and leader of a Consulting Company

2017

Unibright

**Marten Jung**

CEO, Founder  
Integration Specialist,  
Blockchain Enthusiast,  
Out-of-the-box mind

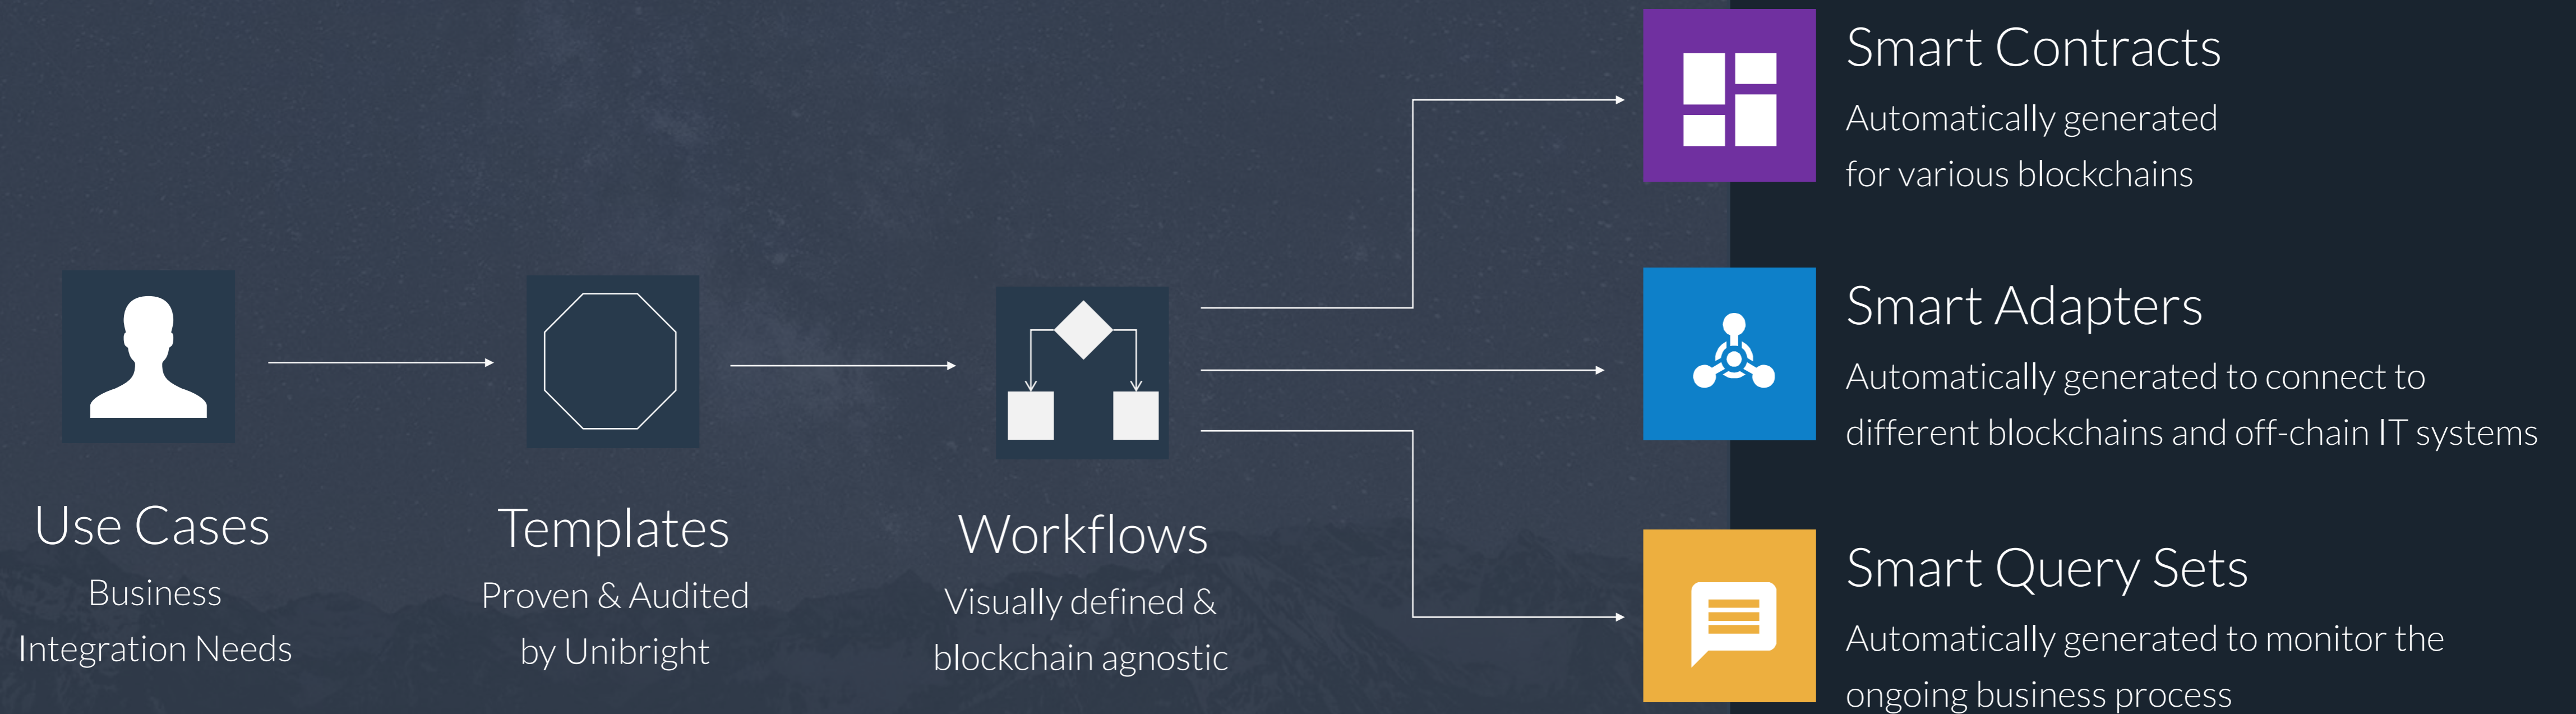

**Stefan Schmidt**

CTO, Co-Founder  
Software Architect,  
Spin Doctor,  
Heavy Metal Musician

# We are business integration specialists

We are now offering Unibright – the first unified framework for blockchain based business integration

OK... WAIT A MINUTE!

# Blockchain for Business Integration?

Supply Chain Management  
Tracking goods and processes

Finance  
Payments, Trade, Approval,, ...

Internet of Things  
Sensors, Data, Monitoring , ...

Data Ownership  
User Data, Monetization, ...

Energy  
Supply, Metering, Billing , ...

Unsafe markets  
Security, Integrity, Disintermediation

# MULTI PARTY APPROVAL TEMPLATE

## Use case: Approval process for jewelry design

Company internal roles

Approval?

Manufacturer abroad

2012: No integration  
Emails, Calls, Excel files

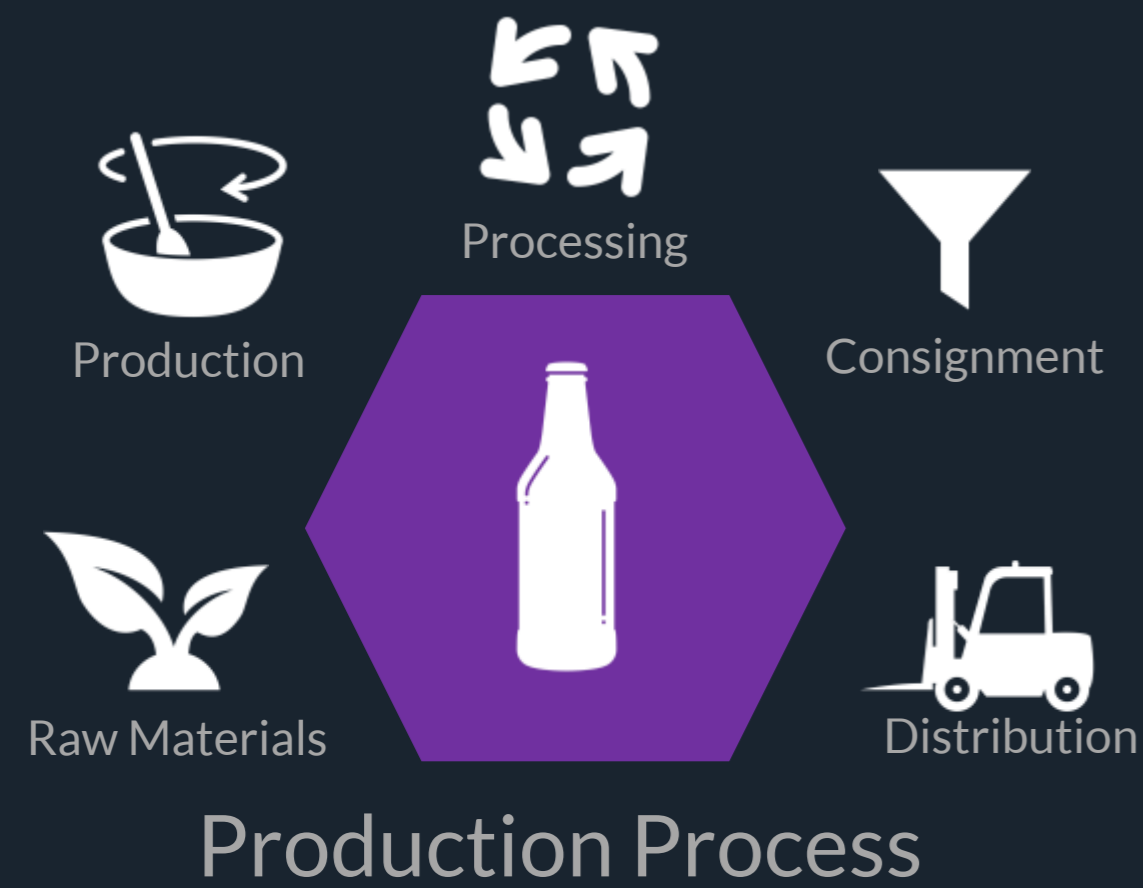

2015: ERP based approval process  
Still manual conversation with manufacturer abroad

2018: Blockchain integrated  
Private blockchain for manufacturer approval  
with automatic integration in ERP System

Template

Multi Party Approval

# Use case: Tracing batches of a bottled beer

Production Process

Consumer Safety & Competitive Advantage

End Consumer

2004: No integration  
Flat Files, Manual Protocols,  
Manual checks without IT support

2008: Batch tracing integration  
Knowing all production batches, times and distributions,  
still holding all information internal

2018: Blockchain integrated  
Sharing selected batch tracing information in  
a public chain, empowering end consumers

A UI mockup for the 'Template' system. It features a header with the 'Template' logo and name. Below it is a 'Batch Tracing' section containing a barcode and a magnifying glass icon. At the bottom, there are three navigation icons: a purple square with a white grid, a blue square with a white network icon, and a yellow square with a white speech bubble icon.

# Use case: Quality tests and production control of fire-proof materials

Quality Control Process

Quality,  
Safety &  
Reliability

Processing Industry

2018: Blockchain integrated  
Blockchain for exchanging and verifying quality certificates with automatic integration in ERP System

2012: Integration with SAP ERP  
Quality data sent to ERP –still manual verification needed

2010: No integration  
Printed certificates – manual quality control

Template

Asset Lifecycle

# Empowering process specialists to use blockchain for business integration

**HELP!**

“Yet another domain in which we need experts. Developers are rare!”

**HELP!**

“Blockchain technology changes so fast! Which implementation to take?”

**HELP!**

“How can blockchain technology be integrated into our existing systems?”

**HELP!**

“We have all these systems and smart contracts! Now what do they tell me?”

**UB Workflow Designer**

High-level

Visually oriented

**UB Contract Lifecycle Manager**

Blockchain agnostic

Automatic

**UB Connector**

Connective

Customizable

**UB Explorer**

Informative

Comprehensive

# Supporting the complete Business Integration Lifecycle

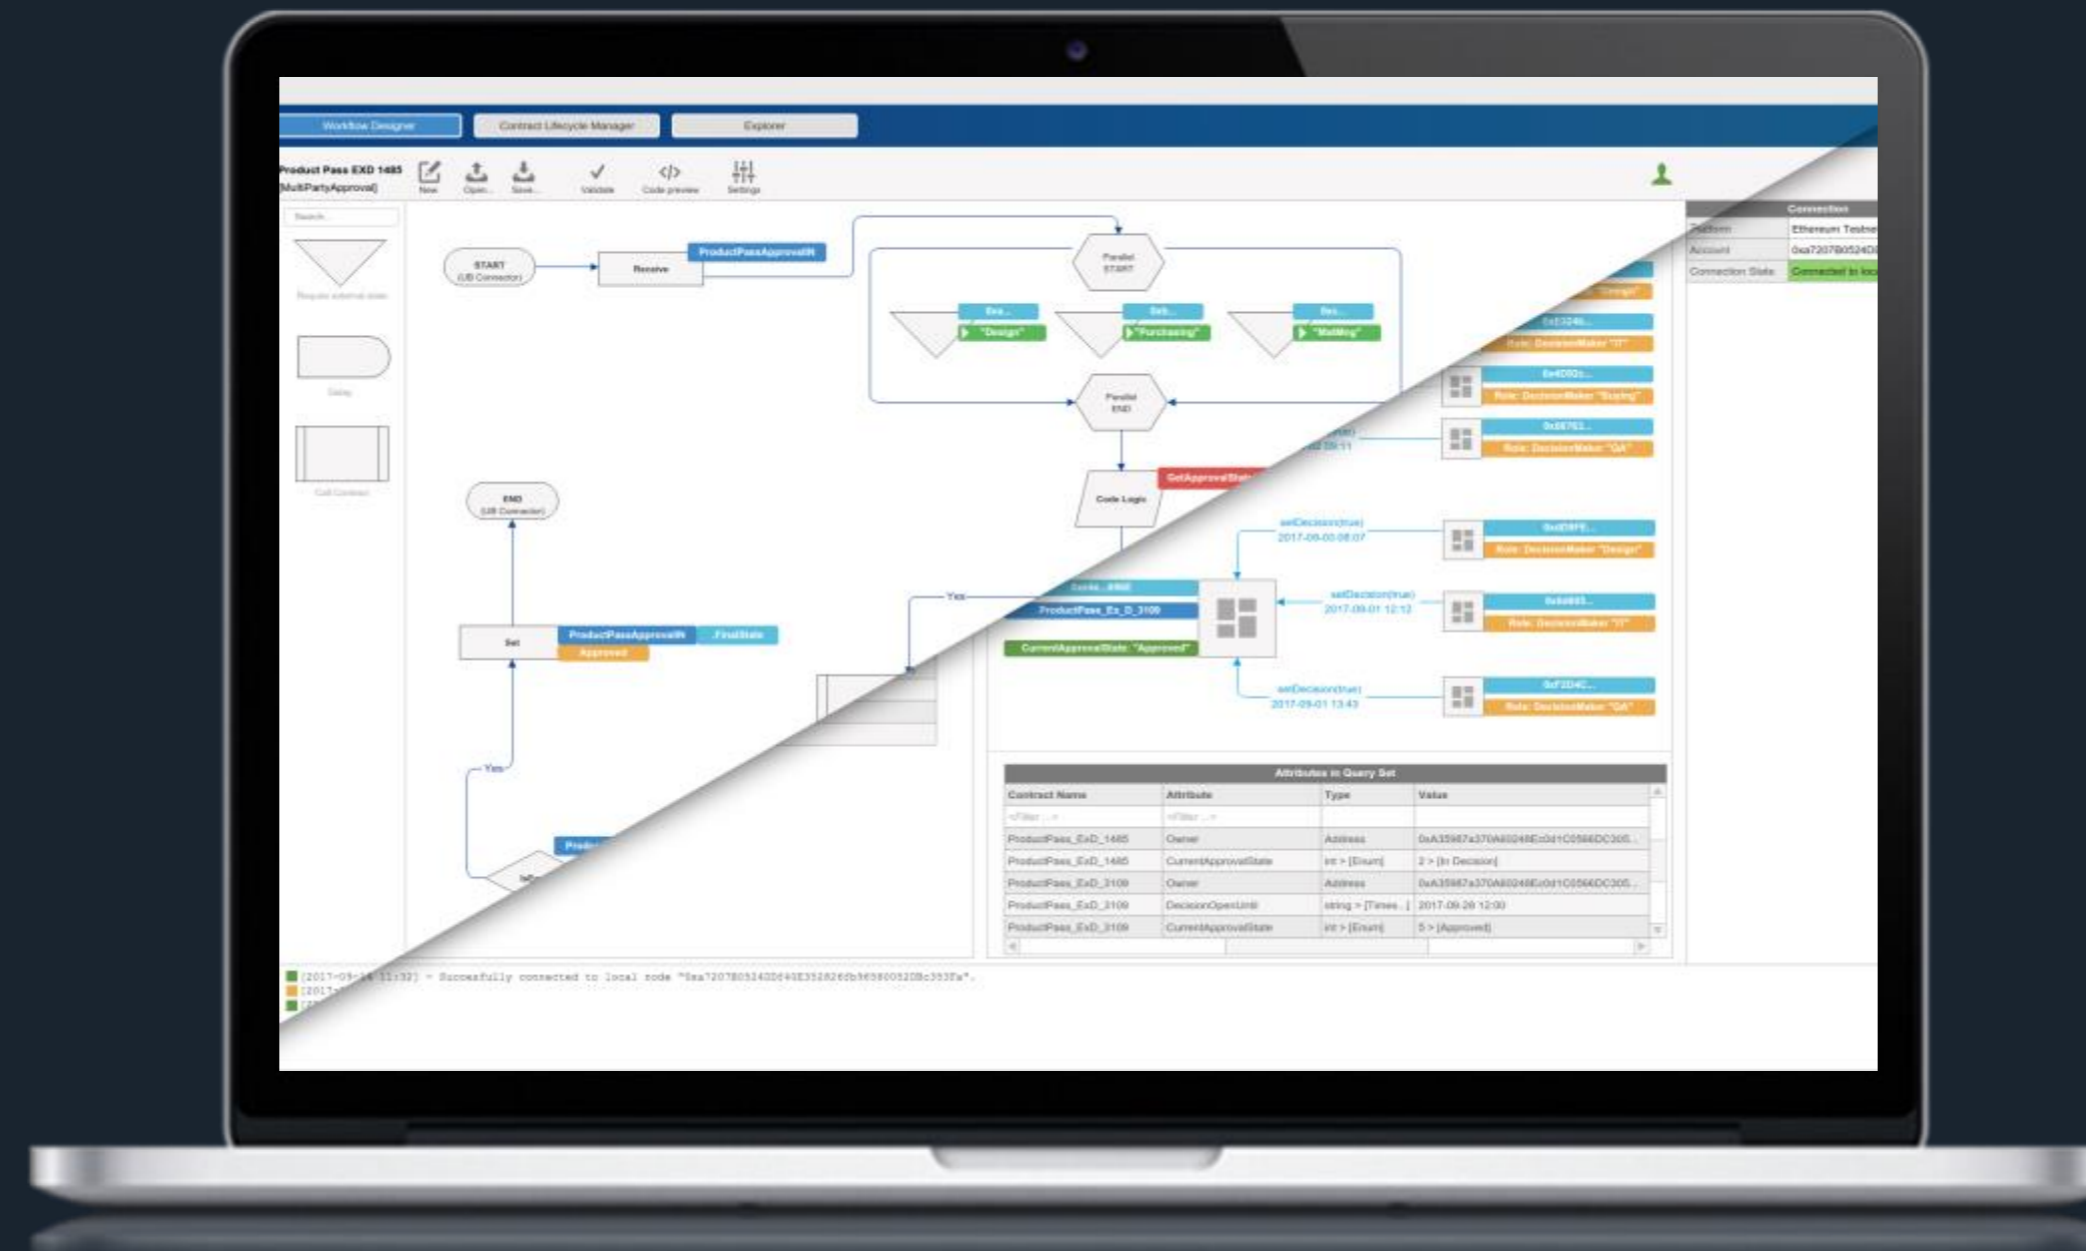

## UB Workflow Designer

Visually define  
Smart Workflows, system  
boundaries and blockchain use

## UB Contract Lifecycle Manager

Deploy and Maintain  
automatically generated  
Smart Contracts

Choose a template, customize the integration workflow, generate all derived objects automatically and monitor the complete process.

## UB Connector

Smart Adapters connect to  
various blockchains and off-  
chain systems (e.g. ERP)

## UB Explorer

Monitor the ongoing process  
by business case related  
Smart Queries

# Benefits from a unified framework

We have been running our own cloud-based integration platform PIP since 2011. We serve clients from producing industry, retail and banking. We integrate SAP ERPs and developed more than 50 adapters to connected systems.

We were looking for a plugin based integration solution. PIP reduced the manual costs of our integration cases about 90%”

— DG-Verlag, (Volksbanken + Raiffeisenbanken)

**Reducing implementation costs**  
Relying on smart templates, use case specific and blockchain independent

**Reducing adaption costs**  
Automatic generation of specific implementation items without changing the definition

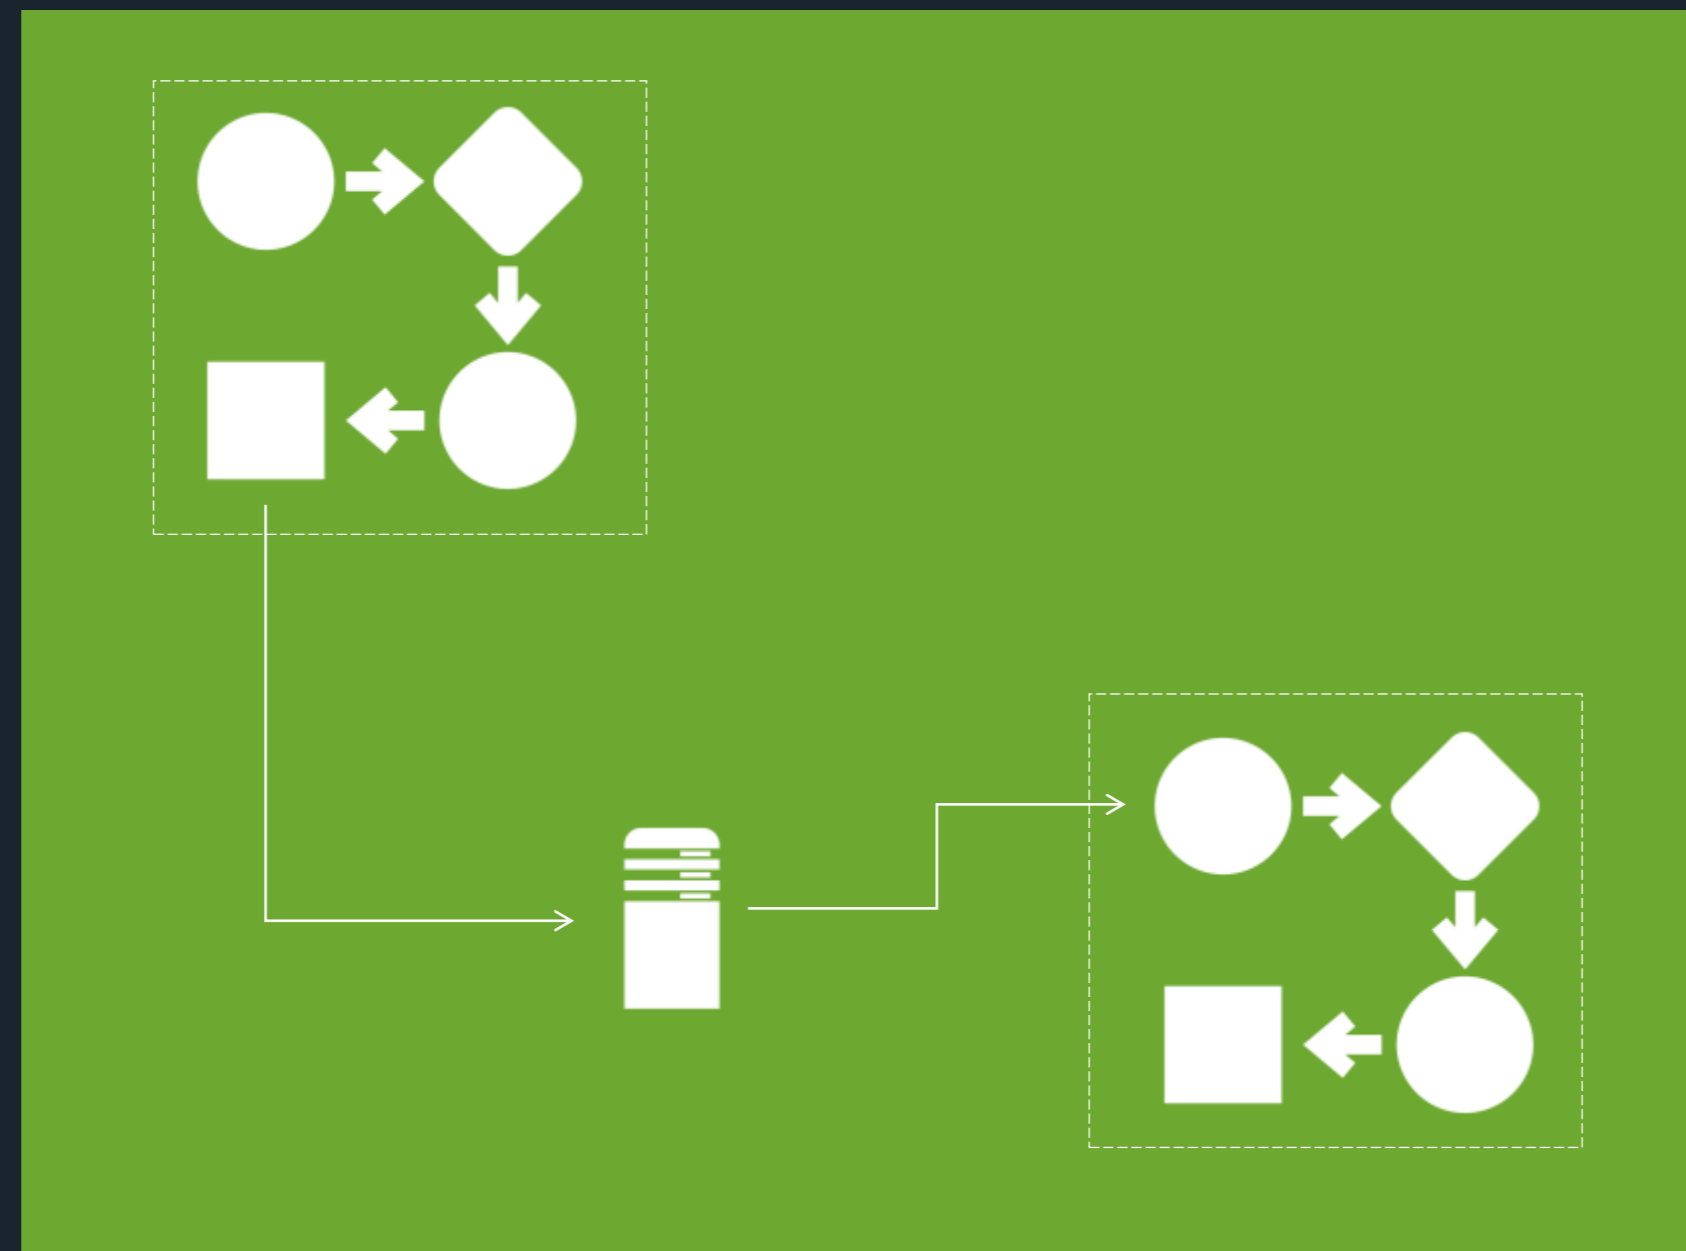

**Increasing process quality**  
High-level definitions of process and information flow, including monitoring

# Unibright – Smart Templates, Workflows and derived smart objects

## Smart Templates

 Multi Party Approval	 Data Collector
 Batch Tracing	 Request for Quotation
 Asset Lifecycle	... and many more...

## Integration Workflows

### Smart Contracts

Automatically generated for various blockchains

### Smart Adapters

Automatically generated to connect to different blockchains and off-chain IT systems

### Smart Query Sets

Automatically generated to monitor the ongoing business process

- ✓ Basic workflow
- ✓ Mappable data object
- ✓ Usecase related QuerySets

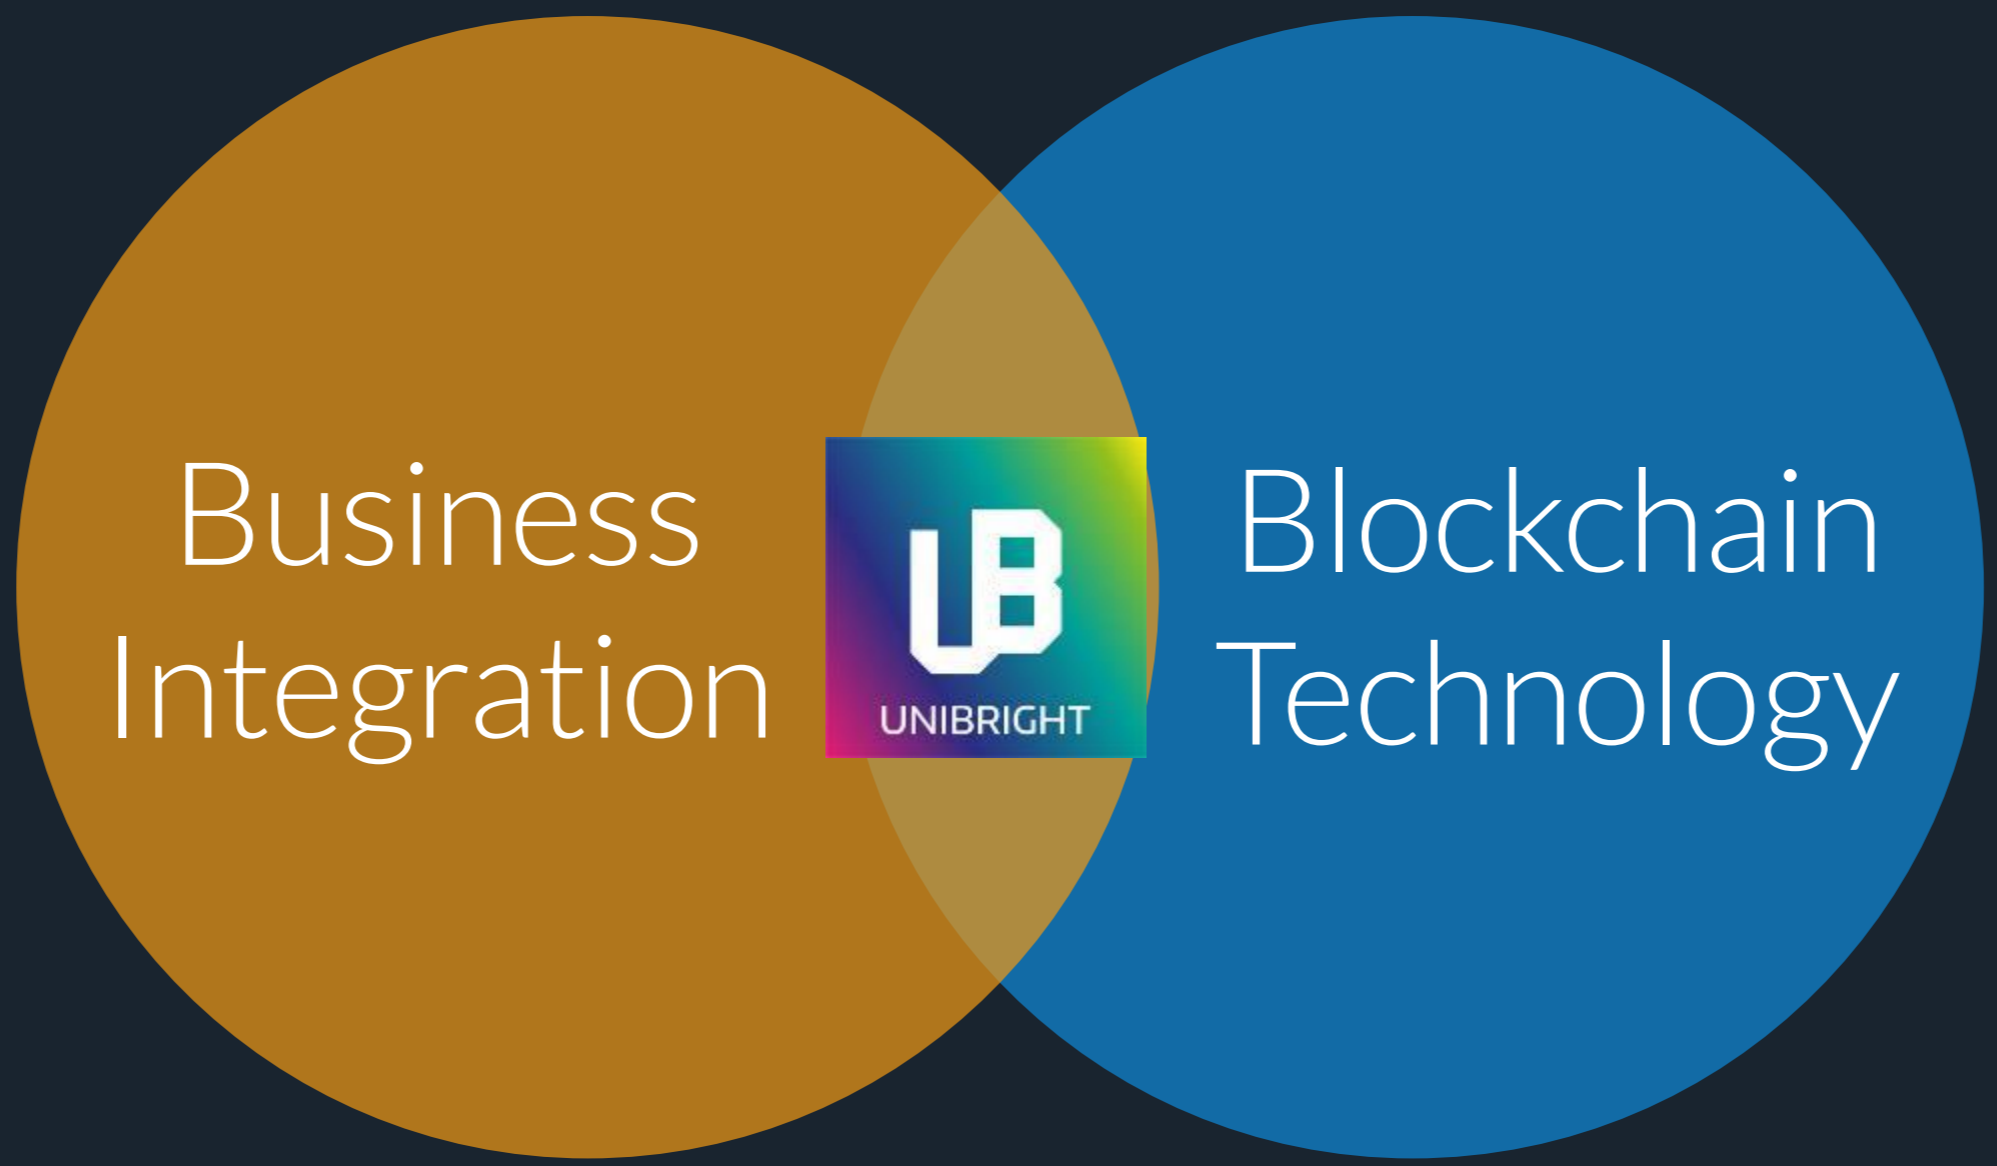

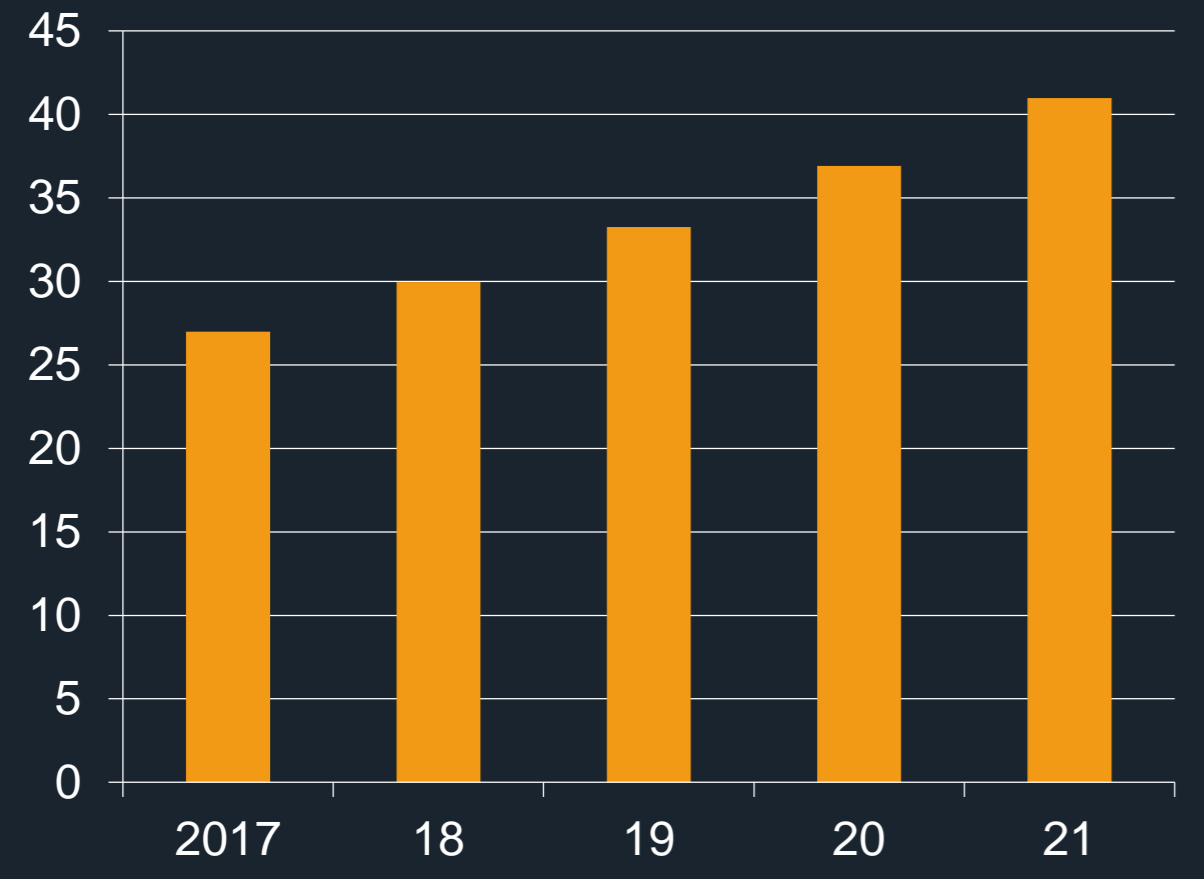

- ✓ Control flow, connections and system boundaries
- ✓ Cross-Blockchain and Cross-System scenarios
- ✓ Template related and blockchain agnostic

- ✓ Implementing the Unibright Contract Interface
- ✓ Connector includes Mapping Engine
- ✓ Showing transaction and information flow

# MARKET OPPORTUNITY

## Combining two growth markets

Market Size 2017: 27 B\$  
+11% p.a.  
[gartner.com]

Market Size 2017: 0,34 B\$  
+61,5% p.a.  
[statista.com]

The need for **business integration** rises due to automatization, digitalization and globalization. **Blockchain technology** will become more and more widespread and offers new possibilities.

**Unibright is the first unified framework for blockchain based business integration.**

# FROM TOKEN LAUNCH TO PRODUCT READINESS

## Roadmap and Business Model

We are able to run our business bootstrapped. The Token Launch helps us to accelerate.

Q1 2018  
Token Launch

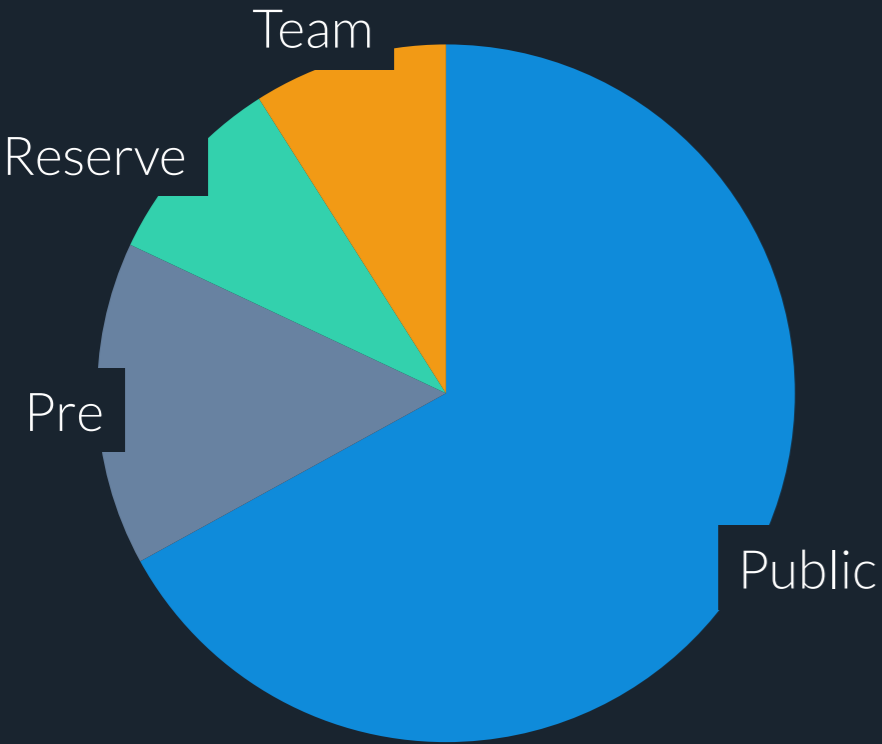

Q2 2018 - Q2 2019  
Implementation

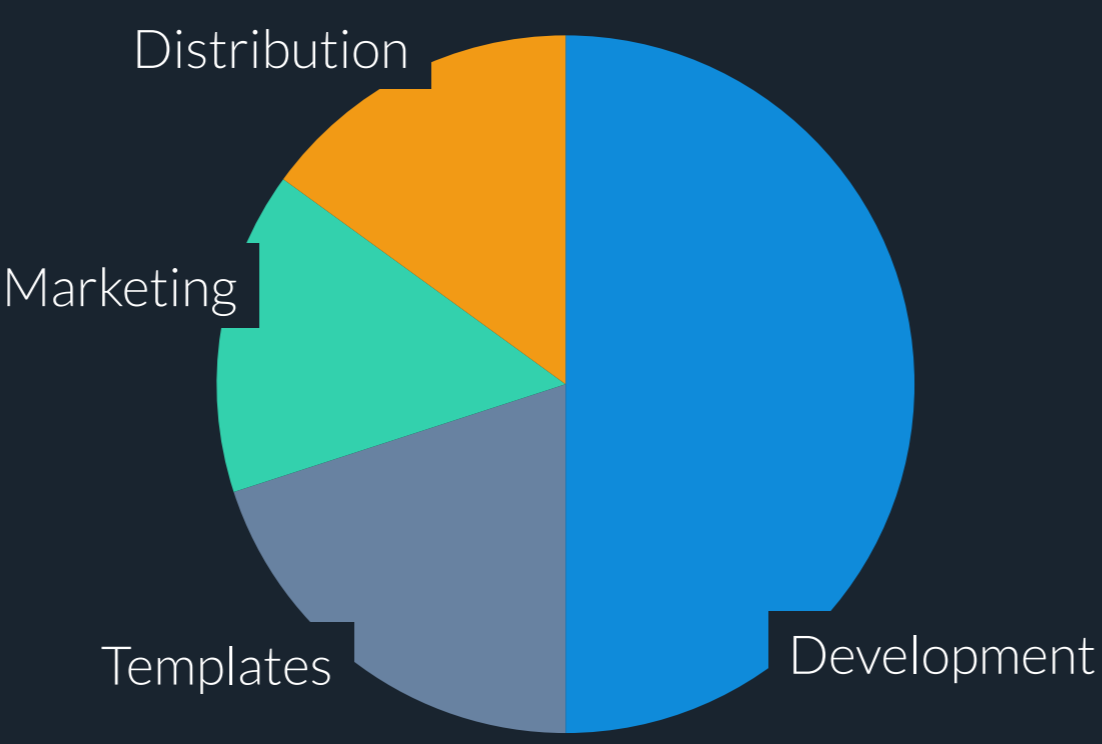

Q3 2019  
Roll-Out

2020  
Operating

Token Distribution

Money Use

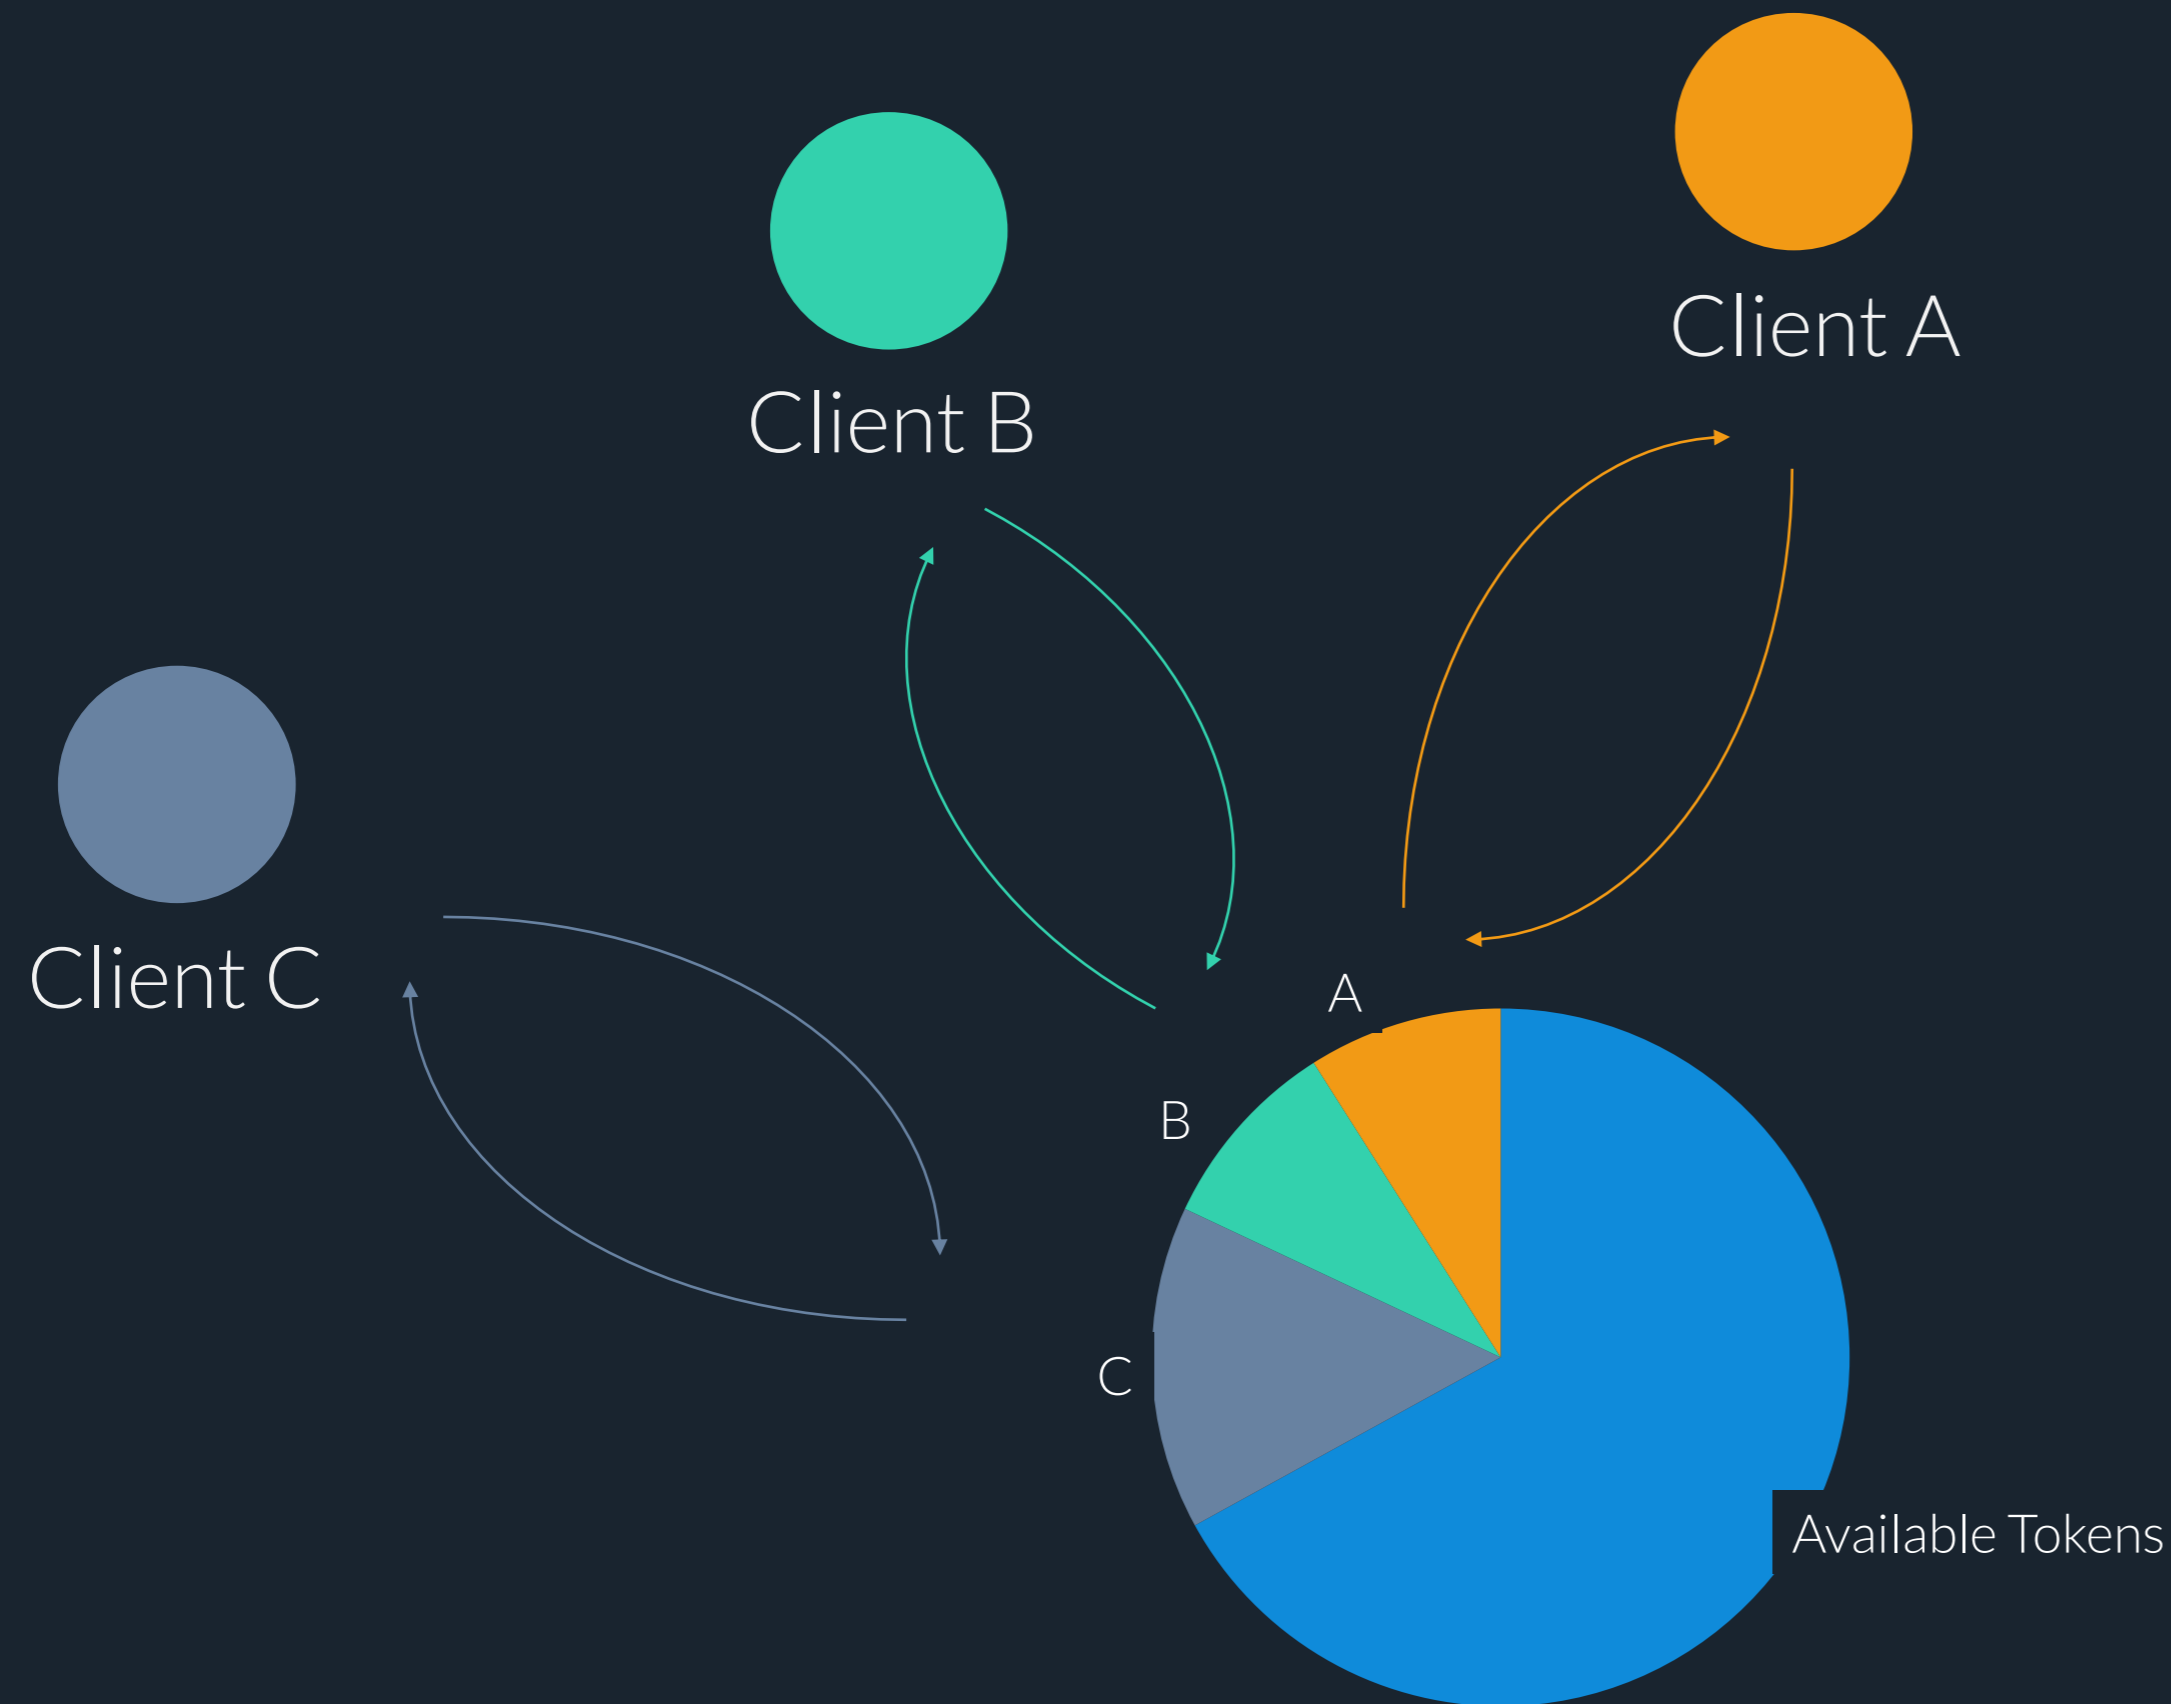

Token Lifecycle

Revenue (Mio EUR)

# Utility Token Model

## The Unibright Token

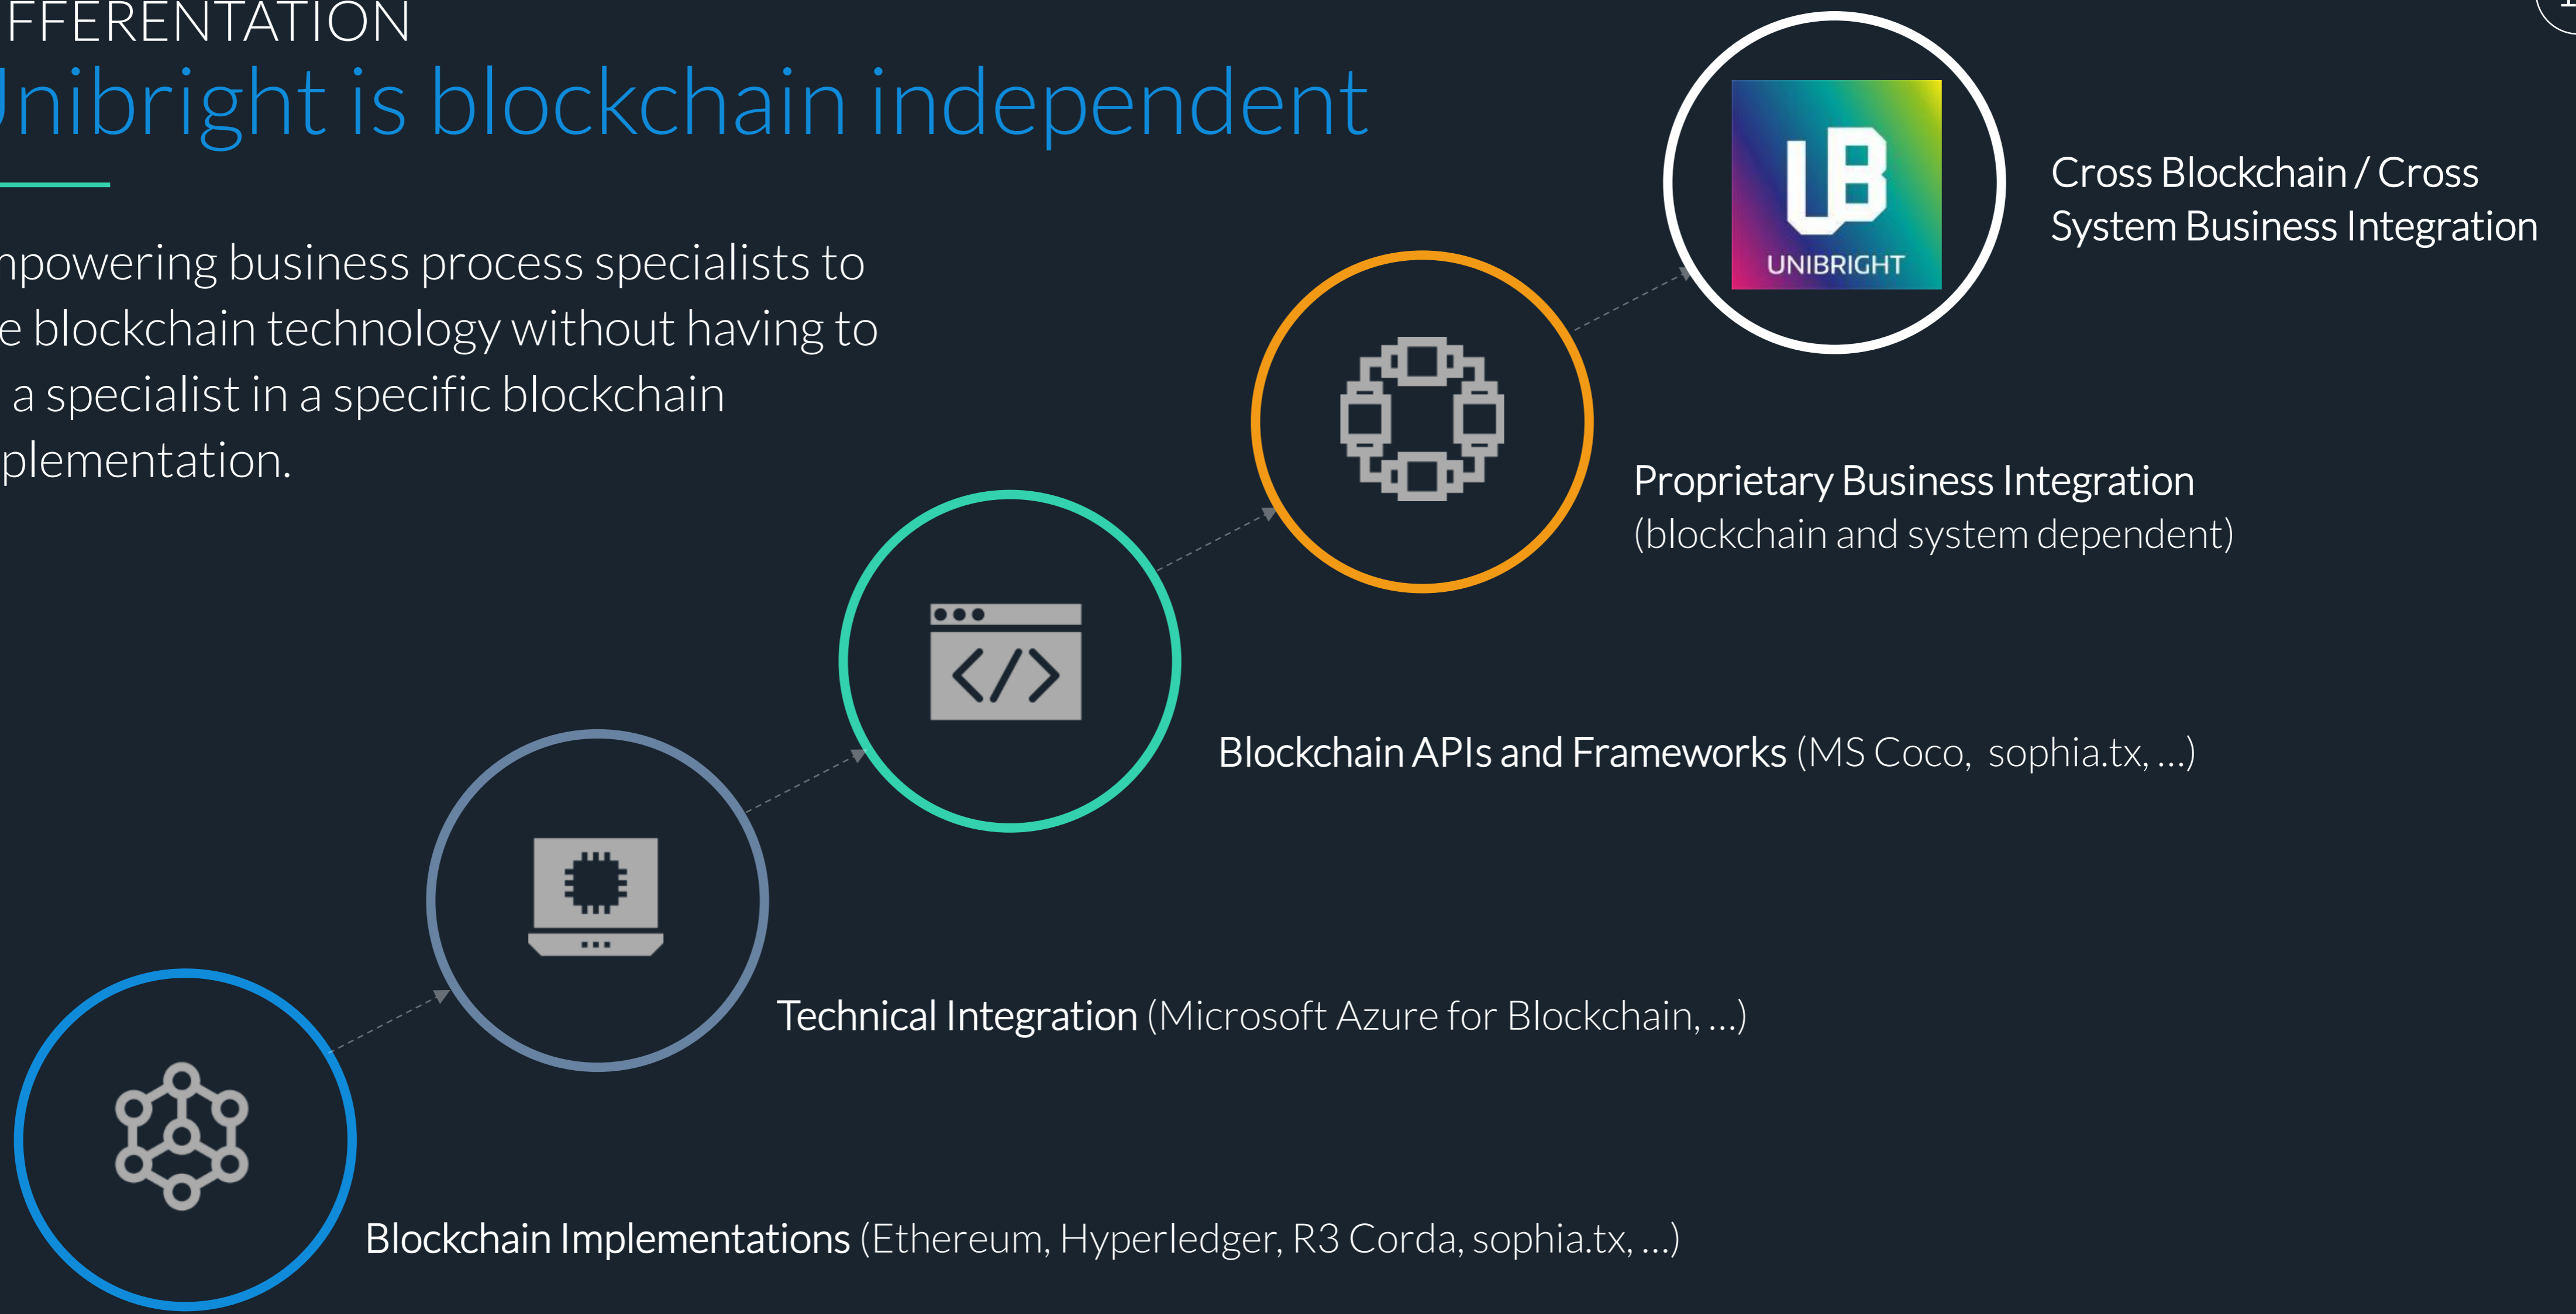

- ✓ Client purchases tokens for proposed monthly integration actions (from Unibright or from token exchange)
- ✓ Tokens are “re-collected” by Unibright and resold to Client, ensuring price stability for a given period (by smart contract)
- ✓ If client needs more integration actions, he can either
  - ✓ purchase additional tokens
  - ✓ subscribe to faster roundtrip for a higher price
- ✓ All client related agreements (price, validity period, roundtrip options) are controlled by smart contracts.

## DIFFERENTIATION

# Unibright is blockchain independent

Empowering business process specialists to use blockchain technology without having to be a specialist in a specific blockchain implementation.

# ROADMAP

## Stairway to Unibright

Our roadmap started 25 years ago.  
Now we aim to establish blockchain technology in the  
Business Integration World.

**1989 - 2015**

Business Integration,  
ERP development and  
business process consulting

**2016**

Spin-Off to focus on  
Blockchain Technology

**2017**

Business Setup, Prototypes,  
Pilot Customers and Token  
Launch Preparation

**2018**

Token Launch and  
Implementation

**2019**

Product Readiness

CORE TEAM  
We are Unibright

**Marten Jung**

CEO, Founder  
Blockchain Enthusiast

**Stefan Schmidt**

CTO, Co-Founder  
Software Architect

**Daniel Benkenstein**

CMO, Head of Marketing

**Bastian Emig**

Lead usecase specialist

**Dr. Moritz Gomm**

Start-Up-Advisor

**Dr. Thomas Schmidt**

Lead Engineer  
Data Modelling

**Ingo Sterzinger**

Lead Engineer  
Frontend

**Fabian Schlarb**

Lead Engineer Testing

The unified framework for blockchain based business integration.

**Token Launch 10<sup>th</sup> April 2018**
