3. Introduction

The activity of buying and selling, especially on a large scale on the web has come back to trust nearly completely on money establishments serving as trusted third parties to method electronic payments. whereas the system works tolerably foremost transactions, it still suffers from the inherent weaknesses of the trust based mostly model.

Completely non-reversible transactions aren't extremely attainable since money establishments cannot avoid mediating disputes. the value of mediation will increase dealings prices, limiting the minimum sensible dealings size and taking off the chance for tiny casual transactions, and there's a broader price within the loss of ability to form non-reversible payments for one sided services.

With the chance of reversal, the necessity for trust spreads. Merchants should be cautious of their customers, hassling them for a lot of data than they might otherwise want. A certain proportion of fraud is accepted as ineluctable. These prices and payment uncertainties can be avoided personally by victimization physical currency, however, no mechanism exists to form payments over a communications channel while not a sure party.

4. Overview of P2P Payment System

Peer-to-peer (P2P) transactions are electronic cash transfers made up of one person acting as sender and another party on a receiving end which passes through an intercessor, usually spoken as a P2P payment application (like an escrow). P2P payments will be sent and received via mobile device or any data processor with access to the net, providing a convenient various to ancient payment strategies.

5. Problems Associated with Current System

- Excess restrictions
- The risk of being hacked
- The lack of anonymity
- Too many payment processors
- Charge back fraud

6. Overview of Claymore Token

Secure ERC20 deflationary currency that prevents against financial manipulation and high volatility. Claymore Token will burn 2% of transfer value for every transaction you create. Deflating the total supply and increasing the value of tokens still in circulating supply
